

When does your child need their eyes tested?

WHICH TEDDY DOES YOUR CHILD SEE AS NORMAL?

The majority of eye conditions don't have any symptoms so you shouldn't rely on your child to tell you they are having problems with their vision. To ensure your child's vision is developing healthily, it's crucial to book them in for regular eye tests. Additionally, take a look at these warning signs which could signal eye problems in your child:

- Rubbing of the eyes
- Moving closer to the TV
- Headaches
- Blinking a lot
- Moving books closer to the face or losing their place regularly
- Clumsiness
- Sensitivity to bright light
- Complaining of headaches or eye strain
- Problems with hand-eye coordination (they may struggle playing ball games)

If you're unsure or in any doubt, then pay us a visit. Our eye exam is free and will give you peace of mind.

If this is your child's first eye test they may be a little nervous. If so, it might be worth bringing them along when you book the appointment.

This will allow them to see the practice and meet the staff, giving them a little more confidence in these new surroundings before their test.
